

Project 2 Sources

Mobile Dropdown

<https://codepen.io/g13nn/pen/eHGEF>

This is the same hamburger menu CodePen snippet that we have used in class previously, and it has become a go-to for me when adding responsive navigation to websites.

Smooth Anchor Jump

<https://stackoverflow.com/questions/7717527/smooth-scrolling-when-clicking-an-anchor-link>

This post taught me how to allow for a smooth anchor jump on my portfolio page when click a top navigation button to quickly traverse the page.

JS Plugin: Carousel

https://www.w3schools.com/bootstrap/bootstrap_carousel.asp

This enabled me to showcase my graphic design section in a way that was not only visually pleasing, but highly functional and easy for users to navigate. This was used on my portfolio page exclusively.

JS Plugin: Fancybox

<http://fancybox.net/api>

This provided a really clean animation when my PDFs or images were clicked, which allowed them to be viewed full-screen, rather than just as a thumbnail or preview.
