

# Project 1 Sources

## Mobile Dropdown

<https://codepen.io/g13nn/pen/eHGEF>

This is the same hamburger menu CodePen snippet that we have used in class previously, and it has become a go-to for me when adding responsive navigation to websites.

## Centered Text Over Image

<https://stackoverflow.com/questions/23773647/how-can-i-vertically-center-text-over-a-responsive-image>

This post taught me how to center text vertically on a responsive image, and now I fully understand why it works as well.

## Cover Background

<https://css-tricks.com/perfect-full-page-background-image/>

This enabled me to ensure the background image on my home page was able to cover the entirety of the background, without repeating or tiling. It also responds nicely to changing screen sizes, which was really helpful.

## Animated Navigation Underline

<https://tobiasahlin.com/blog/css-trick-animating-link-underlines/>

This provided a really clean animation for hovering over the top navigation on my site. I'll definitely be reusing this, as it works really well and was very easy to implement.
